

U.S. energy transmission activity offers hope to the ailing grid

June 17, 2024 | Articles & Books

Davis Polk partner David Penna authored “U.S. energy transmission activity offers hope to the ailing grid” in *Bloomberg Law*. In the article, David explains the challenges of modernizing the aging and fractured U.S. electrical transmission grid and highlights recent actions by the Department of Energy and the Federal Energy Regulatory Commission that should encourage the transmission industry. He notes that these regulatory developments are a major step forward and could provide much-needed momentum to accelerate grid modernization and deploy renewable energy.
