

How generative AI is impacting the legal industry

December 11, 2024 | Webinar

Generative AI is reshaping the legal industry by enabling faster processing of information and transforming workflows. With its capacity to streamline complex language-focused tasks, AI is altering how legal professionals approach their work and interact with clients. As this technology evolves, it will continue to impact the structure and efficiency of legal practices in significant ways.

Join us for an informative discussion of what generative AI looks like for lawyers now and how it is expected to develop over the next decade. We also explore the barriers to generative AI adoption in the legal sector, ethical issues for lawyers and their clients to consider, and what attorney training and development will look like in a generative AI world.

Speakers: Matt Bacal, partner in Davis Polk's IP & Commercial Transactions group, and Rebecca Yeargan, Director of Knowledge Management at Davis Polk
